Waste/Material Removal From Operable Unit 10 Individual Hazardous Substance Sites (IHSSs) 170, 174 and 176

Robert Benedetti, Associate General Mgr, ERM, EG&G, Rocky Flats, Inc. Dennis Ferrera, Associate General Mgr, Maint. & Plant Support, EG&G, Rocky Flats, Inc.

This memorandum is in response to EG&G memorandum JDT-074-93 dated June 22, 1993, regarding the status of the drum remediation in the PU&D Yard. Your June 22, 1993, memorandum states that removal of all materials from the Individual Hazardous Substance Sites (IHSSs) sites 170, 174 (PU&D Yard) and 176 (Building 964 laydown area) on May 28, 1993, was a significant accomplishment critical for meeting IAG milestones for the OU 10 Phase I RFI/RI investigation and report.

The DOE/RFO agrees that the removal of these materials from the IHSSs is a significant achievement. However, this removal is insufficient to allow for the investigation outlined in the Final Phase I RFI/RI Workplan for OU 10. Please find attached figures 7.3-2 and 7.3-3 for the PU&D Yard and figures 7.3-8 and 7.3-9 for the Building 964 laydown area. These figures are located in the OU 10 Phase I RFI/RI Workplan dated July 17, 1993. Inspection of these figures indicates that material removal beyond the IHSSs boundaries is necessary for the Phase I RFI/RI investigation and report to be prepared.

Our initial letter (ERD:BKT:7217 dated July 13, 1992,) requested that EG&G initiate planning immediately for the waste removal at these IHSSs. A subsequent memorandum (ERD:BKT:12235 dated November 5, 1992,) stated that characterization at IHSSs 170, 174 and 176 cannot proceed until the waste material has been removed. The bottom line is that our direction to EG&G on this issue has been directed toward completing the Phase I RFI/RI field work and report. If the waste/materials in the area immediately surrounding the IHSSs as shown on the attached figures is not removed, neither the Phase I field work nor the Phase I report can be completed.

We request that EG&G take immediate action to remove the waste/materials located at IHSSs 170, 174 and 176 in such a manner that the investigation detailed in the Final Phase I RFI/RI Workplan for OU 10 can be completed without any further delays. In addition, we request that the status of this removal effort be provided in the DOE RFP ER Program Weekly Report. Finally, a response to this memorandum including a detailed description of the planned activities should be provided to DOE/RFO by August 1, 1993.
